

health. Our mental abilities such as our skill, talent, and expertise will have an effect on our earning capacity. All three areas interact with each other. There is a fourth area that encompass the other three and that is spiritual.

The spiritual law of tithing (giving 10% of our net income) is mentioned throughout the Bible. It is an act of faith that we give back to our source. We will reap (harvest) what we sow (plant).

No matter where we look in the universe we find that everything is composed of the same chemical elements in much the same proportions. The same chemical and physical process operate. This sameness of the universe implies that life elsewhere could be possible and the sheer size of the universe makes it mathematically probable. Extraterrestrial is intelligent life that developed somewhere other than earth. Supposedly such life has not yet been discovered. Some people think that any contact with another species could be exciting and rewarding while others caution that contact could lead to conflict with some of our personal beliefs and they are right. One thing is certain, if intelligent life is found elsewhere in the universe the outlook for the human race will never be the same again.

In 1961 astronomers discovered what appeared to be an unusual nebula or a vast cloud-like mass of gas and dust. This electromagnetic cloud, more commonly known as the Photon Belt, appeared to have anomalous properties. It is radiating intense electromagnetic radiation throughout the visible spectrum and beyond, into high-frequency invisible light. It was later realized that this nebula's location was coincident with the projected orbit of our solar system and in fact was going to collide with it in the not to distant future.

The photon belt occupies an immense region of space and the thickness of the photon cloud is so large that it takes about 2000 years for our solar system to pass through it. Because the belt is oscillating randomly we enter and leave the cloud periodically and won't completely enter until approximately 2012.

This space encounter will be essentially a spiritual experience because it is part of a magnetic flow of light throughout the galaxy. The psychological characteristics of entering the belt will be the uprooting of hidden, secret, or withheld information. We are already seeing this. People will feel the need to transform and great advancements will occur in our consciousness as we attune to the higher frequencies. Those who are raising themselves to a higher spiritual consciousness will raise themselves much farther while those who are intent on war will beat the drums of war much louder. People who are not really in control of themselves will become more erratic. Those of us who are a little off

balance will become more off balance while those of us who are very balanced will become more stable. There's not going to be anybody in the middle.

The earth is a giant magnet spinning in space. It behaves like an enormous electric circuit. The atmosphere is actually a weak conductor and there is a vertical current flow between the ground and the ionosphere. Ions are electrically charged atoms. There are different layers to the ionosphere. There is a cavity in the lower level where quasi-electromagnetic waves exist known as "Schumann Resonance" but they have to be excited to be observed. There is a relationship between these waves, the "Van Allen Radiation Belt" and solar sunspots.

It is not widely reported in the U.S. but the Schumann Resonance is rising dramatically while the magnetic field of the earth is decreasing. As the earth is passing thru the Photon Belt, the earth's rotation is slowing. Scientists do not know what to make of this.

It turns out that the Earth's Schumann Resonance's are in tune with the human brain's alpha and theta states. Alpha waves are associated with meditation and relaxation while theta waves are associated with dreamy and creative states.

To find out more about this, just use the library or an Internet search engine and look up Schumann Resonance / Photon Belt.
